

DIFFERENTIAL SERVICE

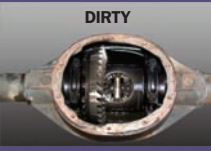

Many vehicle manufacturers recommend changing differential gear oil as often as 15,000 to 30,000 miles, or even sooner.*

Complete Automotive Maintenance Programs

*Manufacturer's recommendations may vary. See your owner's manual for your vehicle's requirements.

Gear oil lubricated differentials are found in two-wheel drive and four-wheel drive pickup trucks and SUVs, as well as rear-wheel-drive passenger cars and vans. Periodic replacement of the gear oil is specified by vehicle manufacturers to maintain the performance and longevity of the differential.

THE PROBLEM

Over-extended gear oil service can:

- Lead to gear oil breakdown
- Cause poor differential performance and operational noise
- Allow excessive wear and corrosion of gears, especially under severe service driving conditions such as heavy loads, high temperatures and stop-and-go driving
- Contribute to premature differential failure and replacement (a differential assembly can cost more than \$2,000 to replace!)

THE SOLUTION

Complete replacement of the old differential fluid, in accordance with manufacturer recommended intervals. Using Wynn's high-performance synthetic gear oil and state-of-the-art Wynn's *DiffServ™ Differential Fluid Service Machine*, the advantages include:

- Helping extend differential component life
- Superior protection of differential, especially under extreme conditions, including protection against friction, wear and corrosion

HELP KEEP YOUR VEHICLE RUNNING SAFELY AND RELIABLY WITH A COMPLETE WYNN'S® DIFFERENTIAL FLUID SYSTEM SERVICE.
