

ENGINE

PREMIUM GDI (GAS ENGINE) OIL CHANGE 2-STEP KIT

Wynn's Premium GDI (Gas Engine) Oil Change Kit is an effective 2-step process. Step One, Wynn's Premium Oil System Cleaner, chemically cleans and conditions the crankcase, safely removing harmful oil system deposits, holding them in suspension for a more complete oil change. Step Two, Wynn's Premium Oil Treatment, reduces friction and wear, improves oxidation and viscosity stability and protects against low-speed pre-ignition (LSPI).

Add Wynn's Premium Oil System Cleaner to the crankcase prior to an oil change. Add Wynn's Premium Oil Treatment with the addition of new oil.

FEATURES & BENEFITS

Premium Oil System Cleaner:

- ✓ Cleans & Conditions Crankcase
- ✓ Improves Compression & Reduces Oil Consumption
- ✓ Provides a Better Drain, Reducing Contamination of New Oil
- ✓ SN Plus Motor Oil Compatible

Premium Oil Treatment:

- ✓ Advanced Anti-Wear Protection
- ✓ LSPI Safe
- ✓ Full Synthetic Formula
- ✓ Extended Service Interval Protection
- ✓ Improved Oxidation Stability

SPECIFICATIONS:

Kit No: ZWK10084

Includes: ZW81610 and ZW80003

Case Quantity: 12 Kits

ENGINE

PREMIUM GDI (GAS ENGINE) OIL CHANGE 2-STEP KIT

THE PROBLEM:

GDI engine popularity is on the rise and today's engine design sometimes incorporates smaller, lighter engines that operate under higher temperatures than engines of the past. Engines must not only be fuel efficient and produce low emission levels but must also maintain the performance and durability that car owners depend on.

Unburned fuel from normal engine operation leads to sludge and carbon deposit buildup that accumulates over time and immediately contaminates engine oil. There has also become an increase in low-speed pre-ignition (LSPI) resulting in engine damage due to lack of regular maintenance.

Oil changes don't remove all contaminated oil during an oil change. Used oil that is left behind is one of the major causes of sludge and harmful varnish deposits that contaminate new oil added.

A proven engine oil cleaner and treatment that adds this extra measure of lubrication and protection is desperately needed by drivers striving for the utmost in performance, protection and durability.

THE SOLUTION:

Wynn's Premium GDI (Gas Engine) Oil Change 2-Step Kit is a newly formulated kit containing Wynn's Premium Oil System Cleaner and Wynn's Premium Oil Treatment.

- Wynn's Premium Oil System Cleaner safely dissolves and suspends engine oil deposits throughout the engine, from the valve to the oil pan. Optimum lubrication is provided with this formula that includes extreme pressure lubrication agents.
- Wynn's Premium Oil System Cleaner provides a better drain by dissolving and thinning highly oxidized oil, allowing a more complete drain of the used oil, effectively reducing the contamination of the new oil.
- Wynn's Premium Oil Treatment includes the very latest in engine detergency, to help prevent additive depletion and reduce friction and wear. The advanced anti-wear protection helps to prevent engine wear associated with start-up and severe driving conditions.
- Wynn's Premium Oil Treatment improves oxidation stability to slow oil thickening caused by high temperature and extended service intervals.
- Wynn's Premium Oil Treatment improves viscosity, is compatible with SN Plus motor oils and combats engine wear.

Directions: Add Wynn's Premium Oil System Cleaner to the crankcase prior to an oil change. Add Wynn's Premium Oil Treatment with the addition of new oil.
