## FRICITION PROOFING+

Wynn's® Friction Proofing+ is formulated for superior effectiveness on modern engines of today, and provides improved oxidation stability. The treatment includes the very latest in engine oil detergency, including low-speed pre-ignition (LSPI) protection. This product helps prevent additive depletion and reduces friction and wear.

Add Wynn's® Friction Proofing+ to the crankcase at each oil change or once between changes as a supplement. Do not exceed the maximum fill level.

### FEATURES & BENEFITS

- ✓ Advanced Anti-Wear Protection
- ✓ LSPI Safe
- ✓ Full Synthetic Formula
- ✓ Extended Service Interval Protection
- ✓ Improved Oxidation Stability
- ✓ Viscosity Improvement

### SPECIFICATIONS:

Product No: ZW80003  
Net Weight: 11 FL OZ (325 ml)  
Case Quantity: 24 Eaches

## FRICITION PROOFING+

### THE PROBLEM:

Today's engine designs incorporate smaller, lighter engines that operate at higher temperatures than engines of the past. These engines must not only be fuel efficient and produce low emission levels, but must also maintain the performance and durability that car owners depend on.

GDI engine popularity is on the rise and with it an increased demand for lubrication that supports these new engine specifications and a regular maintenance program. At the heart of the engine is its lubrication system, essential to efficiency, performance and durability.

Engine oil must perform in an internal engine environment where factors such as heat, pressure and contamination affect not only its performance and useful service life, but the performance and life of the engine itself.

Even the best engine oils contain additives which are depleted with use, making the use of professional formula supplemental treatments a wise choice for the motorist wanting the most from his or her engine. A proven engine oil treatment that adds this extra measure of protection to enhance the basic formulation of today's quality motor oil is desperately needed by drivers seeking the utmost in performance, protection, and durability for the life of their investment.

### THE SOLUTION:

Wynn's® Friction Proofing+ is formulated to meet the needs of today's engines and manufacturers' extended service intervals. This treatment includes the very latest in engine detergency, oxidation stabilizers, anti-wear protection and friction modifiers. Wynn's Friction Proofing+ stabilizes viscosity over a range of temperatures, is compatible with SN Plus motor oils and combats engine wear.

Wynn's® Friction Proofing+ is a full synthetic formula which is also compatible with synthetic blends and traditional motor oils. A product that meets today's lubrication needs; protecting your engine from the normal wear and tear due to the below features:

- Premium detergents maintain engine cleanliness by preventing the accumulation of harmful deposits that cause carbon build-up while protecting against LSPI.
- Friction modifiers reduce friction and increase engine efficiency.
- Advanced anti-wear protection boosts the anti-wear properties of your engine oil and prevents engine wear associated with start-up and severe driving conditions.
- Improved oxidation stability slows oil thickening caused by high temperatures and extended service intervals.
- Viscosity control supports oil consistency in a variety of temperature ranges.

**Directions:** Add Wynn's® Friction Proofing+ to the crankcase at each oil change or once between changes as a supplement. Do not exceed the maximum fill level.
