

FUEL

COMBUSTION CHAMBER CLEANER

Wynn's® Combustion Chamber Cleaner is a complex blend of solvents with varying polarity and aromaticity, with added components to enhance cleaning capability and to protect metal surfaces. Carbon deposits may form in the throttle bore, on the surfaces in the intake manifold, on the backs of valves, and inside the combustion chambers. Deposits that become too hard for gasoline detergents to clear, may build up inside the injectors. This versatile product may be introduced at the throttle plate, through a vacuum source, or through the fuel rail, to target hard carbon deposits wherever they form.

Features and Benefits:

- ✓ Quickly and Safely Cleans Fuel Injectors, Intake Valves and Combustion Chambers
- ✓ Restores Power, Performance and Fuel Economy
- ✓ Rapidly Removes Intake Valve Deposits
- ✓ Oxygen Sensor and Catalytic Converter Safe

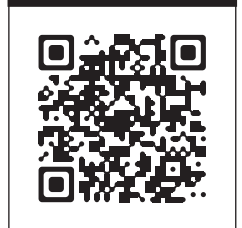

SPECIFICATIONS:

Product No: ZW68917

Net Weight: 11 OZ (325 mL)

Case Quantity: 24 Each

FUEL

COMBUSTION CHAMBER CLEANER

THE PROBLEM:

- In combustion chambers, carbon deposits form due to incomplete combustion. Engine oil blowing past the piston rings contribute to the problem. These deposits rob power by decreasing combustion chamber volume and by increasing piston ring friction.
- Carbon deposits inside the throttle body, intake manifold, and on the backs of valves disrupt the flow of air, choking the engine and degrading performance.
- Carbon deposits in and on fuel injectors may impede the flow of fuel and disrupt spray patterns, reducing power and efficiency.

THE SOLUTION:

- Wynn's® Combustion Chamber Cleaner attacks combustion chamber deposits two ways: by clearing intake deposits, leading to more efficient combustion, and by softening and loosening hard carbon deposits inside the combustion chamber.
- Wynn's® Combustion Chamber Cleaner, introduced through the throttle body or into a vacuum source, delivers cleaning function directly to these deposits.
- Introduced through the fuel rail, Wynn's® Combustion Chamber Cleaner cleans blocked fuel injectors immediately without the need to run a full tank of gas with special detergents.

Directions: Use Enviropurge™ tool #ZW04000 with Adapter Kit #ZW04001 for service directly through the fuel rail or with #ZW31500 for service through the throttle body. Use #TN15000 tool to apply to a centrally located manifold vacuum source.
