## HIGH MILEAGE OIL TREATMENT

Wynn's® High Mileage Oil Treatment is specifically formulated for GDI, PFI, Hybrid, and Turbo-Charged engines over 75,000 miles. This synthetic based formula conditions seals and gaskets, improves engine compression, reduces and stops oil leaks, and reduces exhaust smoke due to oil burning. Help protect high mileage vehicles from damage due to oil depletion and extend the longevity of the engine by using Wynn's® High Mileage Oil Treatment at each oil change interval.

### FEATURES AND BENEFITS:

- ✓ Conditions Seals & Gaskets
- ✓ Reduces Friction & Wear
- ✓ Enhances Power & Acceleration
- ✓ Fully Synthetic Formula
- ✓ LSPI Safe
- ✓ Reduces and Stops Oil Leaks and Exhaust Smoke Due to Oil Burning

### SPECIFICATIONS:

Product No: ZW83011

Weight: 11 OZ (325 mL)

Case Quantity: 24 Each

## HIGH MILEAGE OIL TREATMENT

### THE PROBLEM:

Over time, o-rings and gaskets lose their ability to form seals to keep fluids like engine oil from leaking. Use of synthetic oils accelerates this process due to their greater propensity to pull elasticizers out of rubber material, causing it to shrink, harden, or become brittle. Oil leaks can then result in increased oil consumption and smoking.

Modern vehicles achieve greater fuel economy due to advances in both automotive engineering and fluid technology that reduce power-robbing friction. Older vehicles may experience greater fuel consumption due to less friction control.

Even a regularly maintained high mileage vehicle can accumulate sludge buildup which can lead to reduced oil flow, oil starvation, and potential engine damage.

### THE SOLUTION:

Wynn's® High Mileage Oil Treatment conditions seals and is proven to protect elastomers from the damaging effects of synthetic base oils. This product reduces and stops oil leaks and oil burning. Ashless anti-wear and adipate ester provide additional seal protection.

Wynn's® High Mileage Oil Treatment formula is designed to reduce friction between sliding metal surfaces. This valuable product is proven to enhance power, acceleration, and wear protection, and improve fuel economy when added to the engine crankcase.

Wynn's® High Mileage Oil Treatment is formulated with an LSPI-safe detergent for engine cleanliness. Following an oil change with Wynn's® Premium Oil System cleaner, add Wynn's® High Mileage Oil Treatment to prevent harmful sludge formation.

**Directions for Use:** Add one bottle with new oil at each engine oil change. Treats up to 6 quarts.
